1. Create Angular App and generate required components with Angular Routing.

- A page with 4 routes (Home, Users, Mobiles, and Login)
- Should be able to navigate to the page assigned to each route
- If route is invalid it should redirect to page not found page
- Login page should have a Template Driven form with username and password fields with validation
- In Users page fetch the data from the given JSON file and display in table format
- In Mobiles page fetch the data from the given JSON file and display using bootstrap cards

2. Create an angular service for performing crud operation on the given API

- A page with 4 routes (Home, Add Photos, and Photos)
- One Angular service should have GET, POST, PUT and DELETE http methods and Observables.
- Use this RESTful API https://jsonplaceholder.typicode.com/photos and display in photos page in table format with update and delete options.
- In Add Photos page have a Reactive form with validations to add Photos and the newly added photo and description has to be updated in Photos page.

users.json

```json
[
    {
        "name": "Balasubramaniam",
        "email": "balu@yahoo.com",
        "phone": 8765568782
    }, {
        "name": "Sanjay Sahu",
        "email": "sanju@hotmail.com",
        "phone": 6587654687
    }, {
        "name": "Naveen Chandra",
        "email": "chandra2345@gmail.com",
        "phone": 3455434433
    }, {
        "name": "Mickey Meyer",
        "email": "micky@yahoo.com",
        "phone": 8765456775
    }, {
        "name": "Abhimaan",
        "email": "abhimaan@gmail.com",
        "phone": 6645678765
    }
]
```

mobiles.json

```json
[
    {
        "brand": "samsung",
